History:

RockAuto, LLC was founded in Madison, Wisconsin in 1999 by the Taylor family. Their engineering background, passion for old cars, and desire to liberate information hidden behind the auto parts store counter led the Taylors to start RockAuto. Over the years, the company and its selection of parts have steadily grown. Millions of parts orders have been successfully delivered to RockAuto customers.

Company Today:

RockAuto ships thousands of auto parts from over 300 manufacturers to customers on every continent except Antarctica-including APO/FPO addresses. The RockAuto catalog is updated daily with mechanical parts like brake pads and shock absorbers, body parts like bumpers and mirrors, interior trim like door handles and carpets, and major assemblies like steering gears, CV axles, engine long blocks, and complete transmissions. There are no mechanics on staff (RockAuto is a store, not a repair shop) but service manuals are available to help customers learn how to perform a repair. The RockAuto catalog is expanding constantly. Someday, it may be possible to build an entire car using parts from RockAuto!

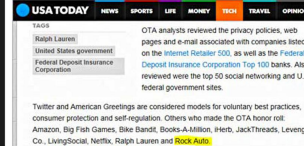

Customer Service:

Exceptional customer service through leading edge technology is a top priority at RockAuto. Business hours and contact information appear below. Responsiveness to customers is recognized: RockAuto.com consistently earns top scores in third party customer service surveys.

Chris Bell		627luv@gmail.com		November 11th	
PRODUCT UNDER TEST What's being tested? What are the business and experience goals of the product? rockauto.com. A parts website that offers automotive, motorcycle, marine & universal products. GOAL: liberate information hidden behind the store counter.	TEST OBJECTIVES What are the goals of the usability test? What specific questions will be answered? What hypotheses will be tested? GOALS: - Identify labels for top level organization/navigation. -Measure findability of site content. * How does the current/proposed site structure/design impact findability where usability is the focus?	PARTICIPANTS How many participants will be recruited? What are their key characteristics? 5-7 participants recruited via email questionnaire. -all must have solicited general mechanical resources in the past 6 months. -mix of men & women, mechanical professionals & consumers.	TEST TASKS What are the test tasks? List the categories on an automotive parts website. Group content under the categories listed.	RESPONSIBILITIES Who is involved in the test and what are their responsibilities? Chris Bell (PM, analyst) Taheera Sabree (recruiter)	
BUSINESS CASE Why are we doing this test? What are the benefits? What are the risks of not testing? Redesign homepage navigation & data presentation. BENEFITS: improved information organization, enhanced usability RISKS: diminished findability.	Do people understand how to locate and purchase mechanical parts on the site? How quickly is the locate / purchase process completed?	EQUIPMENT What equipment is required? How will you record the data? -Computer with Internet access. -Optimal Workshops Card Sort and Tree Test tools. -Paper prototype Optimal Workshop will log and measure usability issues on task.		LOCATION & DATES Where and when will the test take place? When and how will the results be shared? Nov 4th online: http://ows.io/os/Bc14w6pp Results presented Nov 18th.	
PROCEDURE What are the main steps in the test procedure? <div> <div>0-5 min Open / review welcome & instructions</div> <div>5-7 min Answer pre-survey questionnaire</div> <div>7-12 min Sort content under categories</div> <div>12-15 min Complete post-survey questionnaire</div> <div>Data analysis</div> <div>Review/present results</div> </div>					

To uncover how automotive professionals and consumers from various backgrounds and roles expected to see content organized on a website where usability is the focus.

Unmoderated closed card sort; participants organized 14 phrases into four categories that they believed fit most naturally. Participants were given an opportunity to provide feedback on cards they felt did not fit. Participants were required to sort all the cards which were also randomized for each participant.

The results matrix shows the number of times that each card was sorted into the corresponding category.
